

ABSTRACT

A method of communicating data in a mobile communications network is provided. The method comprises recording a voice message for delivery from an initiating device to a terminating device, wherein the initiating device and terminating device are configured to communicate over the mobile communications network; converting the recorded voice message to a text message using a speech-to-text conversion process; and delivering the text message to the terminating device by way of a text messaging service implemented over the mobile communications network for delivering text messages from the initiating device to the terminating device.
